

MOTOR-COMPRESSOR

5

ABSTRACT OF THE DISCLOSURE

10 The output terminal 137 of the circuit board 133
constituting the motor driving circuit board, and the
input terminal 124 penetrating the motor housing 121, are
electrically connected to each other in such a manner
that the outer protrusion 124a of the input terminal 124
is directly engaged to the engagement hole 137a of the
output terminal 137. Thus, the output terminal 137 and
15 the input terminal 124 can be directly connected to each
other without lead wires or the like, so that the work of
connection between the output terminal 137 and the input
terminal 124 can be simplified.
